                             This invention relates to a metalloprotease with aggrecanase activity. The invention includes protein and DNA sequences of the metalloprotease, vectors containing the DNA, host cells transformed by the vectors, and antibodies directed against the metalloprotease. The antibodies, protein and DNA sequences can be used in the treatment and prevention of joint diseases, particularly osteoarthritis. The treatment may result in osteopathic and antiarthritic activity. The present sequence represents the metalloprotease of the invention termed MDTS6.
                                                                                                                                                                                                                                                                                                                           540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is novel human protein (NHP), human protease. NHPs share structural similarity with animal proteases particularly zinc metalloproteases. Sequences of the invention are useful in the rapeutic, diagnostic and pharmacogenomic applications. NHP polynucleotides are used as hybridisation probes for screening libraries and assessing gene expression patterns. They can also be used for treating related biological disorders such as obesity, high blood pressure, arthritis, connective tissue disorders and infertility. They are also used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                YLLTLLATAARLYRHPSILNPINIVVVKVLLLRDRDSGPKVTGNAALTLRNFCAWQKKLN 300

```

The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering S (which modulates protease activity in vitro) may be used to treat a

disorders

```
disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoietic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immune-related diseases and disorders, cardiovascular disease, brain or neuronal associated diseases sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, hypertension, psychotic disorders, neurological disorders, hypotension, psychotic disorders, neurological disorders. (I) may also be useful as a diagnostic tool for a disease or disorder such as those above. AAU72876-AAU72810 represent human protease amino acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to twenty one new human proteases, referred to as PRTS-1 to PRTS-21. The PRTS polynucleotides and polypeptides of the invention are useful in the diagnosis, treatment and prevention of gastrointestinal e.g. gastritis, esophageal carcinoma and crohn's disease, cardiovascular e.g. atherosclerosis, hypertension and myocardial infarction, autoimmune/inflammatory e.g. acquired myocardial infarction, autoimmune/inflammatory e.g. acquired proliferative e.g. cancer, developmental e.g. Duchenne and Becker muscular dystrophy, epithelial e.g. dermatitis, neurological e.g. epilepsy and Alzheimer's disease and reproductive e.g. infertility and endometriosis disorders. Numerous other examples of each disorder are given in the specification. The present protein sequence represents the human protease PRTS-11 protein of the invention.
                                                                                                cardiovascular; atherosclerosis; autoimmune disorder; dermatitis; inflammatory disorder; acquired immunodeficiency syndrome; AIDS; cell profilerative disorder; developmental disorder; epilepsy; buchenne muscular dystrophy; epithelial disorder; neurological disorder; reproductive disorder; endometriosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGLRGAFGYRGAEYVISPLPNASAPAAQRNSQGAHLLQRRGVPGGPSGDPTSRCGVASGW 180

                                                                                                                                                                                                                                                                    .;
?
                                                                The present sequence is rat metalloproteinase ADAMTS-5. The ADAMTS family of proteins is closely related to the ADAMT family and Metalloproteinase Domain, family, wembers of the ADAMTS family contain a thrombospondin domain in addition to the disintegrin and metalloproteinase domains found in the ADAMS. ADAMTS polypeptides are useful for the manufacture of medicaments for treating conditions associated with neuroinflammation and/or neurodegeneration, such as Alzheimer's disease, Parkinson's disease and stroke. They are also useful for treating conditions associated with cell proliferation, cell migration, inflammation and/or anglogenesis, such as cancer, arthritis and autoimmune diseases. They can be used to treat patients afflicted with an invasive tumour, a brain tumour or brain injury.
Polynucleotide encoding novel members of a disintegrin, metalloprotelnase and thrombospondin domain protein family used to prevent and treat Alzheimer's disease, cancer and autoimmune diseases

The present sequence is human metalloproteinase ADAMTS-5. The ADAMTS family of proteins is closely related to the ADAM (A Disintegrin and Metalloproteinase Domain) family. Members of the ADAMTS family contain a thrombospondin domain in addittion to the disintegrin and metalloproteinase domains found in the ADAMS. ADAMTS polypeptides are useful for the manufacture of medicaments for treating conditions associated with neuroinflammation and/or neurodegeneration, such as Alzheimer's disease, Parkinson's disease and stroke. They are also useful for treating conditions associated with cell proliferation, cell migration, inflammation and/or angiogenesis, such as cancer, arthritis and autoimmune diseases. They can be used to treat patients afflicted with an invasive tumour, a brain tumour or brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polynucleotide encoding novel members of a disintegrin, metalloproteinase and thrombospondin domain protein family used to prevent and treat Alzheimer's disease, cancer and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                           The invention relates to the novel human ADAM (A Disintegrin And Metalloprotease) type metalloproteases MDTS4 (AAB73549) and MDTS5 (AAB73550). The metalloproteases can be used for the treatment of cancers and archritis. The invention also relates to the genes encoding MDTS4 and MDTS5, vectors and host cells containing the MDTS4 or MDTS5 specific for MDTS4 or MDTS5, and antibody specific for MDTS4 or MDTS5, and methods of screening for compounds which modulate the activity of MDTS4 and/or MDTS5. The present

ITGL-TSP polypeptides can be used in the treatment of anglogenic diseases such as polypeptides can be used in the treatment of anglogenic diseases such as cancer, cancer metastasis, chronic inflammatory disorders, rheumatold arthritis, atherosclerosis, macular degeneration or diabetic retinopathy, restenosis, Alzhehmer's disease and tissue remodeling. They can be used to treat a subject in need of enhanced activity or expression of the ITGL-TSP polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents human Tango-71. Tango polypeptides are useful for identifying compounds which bind the polypeptide via direct binding, competition binding assays or Tango-71, -73, -74, 76 or -83-mediated signal transduction. Tango polypeptides are also useful for identifying modulating compounds by determining effect on Tango activity. Tango polypeptides and nucleic acids are useful for diagnosing diseases related to aberrant expression of Tango and Tango polypeptides are useful for diagnosing diseases useful for raising antibodies which can be used in diagnostic assays for detection of Tango, and also for generating anti-idiotype antibodies for

                                                                                                                                                                                                                                                                                        The present sequence is mouse metalloproteinase ADAMTS-1. The ADAMTS family of proteins is closely related to the ADAM (A Disintegrin and Metalloproteinase Domain) family, Members of the ADAMTS family contain a thrombospondin domain in addition to the disintegrin and metalloproteinase domains found in the ADAMS. ADAMTS polypeptides are useful for the manufacture of medicaments for treating conditions associated with neuroinflammation and/or neurodegeneration, such as Alzheimer's disease, Parkinson's disease and stroke. They are also useful for treating conditions associated with cell proliferation, cell migration, inflammation and/or angiogenesis, such as cancer, arthritis and autoimmune diseases. They can be used to treat patients afflicted with an invasive tumour, a brain tumour or brain injury.
                                                                                                                                                                                                                  Polynucleotide encoding novel members of a disintegrin, metalloproteinase and thrombospondin domain protein family used to prevent and treat Alzheimer's, disease, cancer and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SLVVVKILVIYEEQKGPEVTSNAALTLRNFCNWQKQHNSPSDRDPEHYDTAILFTRQDLC 346

                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17;
                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX04303) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04440; amino acid sequences: AAX043125) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in (see AAX04311 for described uses).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 207

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Blelloch RH;
```

The present sequence represents a murine ADAMTS-1 protein. ADAMTS-1 is a metalloprotease, a C. elegans GON-1 protein, that lacks a transmembrane domain and possesses a predicted metalloprotease domain between residues to metalloprotease domain between residues comain and possesses a predicted metalloprotease domain between residues to produce elongated tubes, whereas in males, GON-1 is required for migration of a single linker cell to produce a single clongated tube. The protein is used in the method of the invention. The specification describes a method for identifying a modulator of a protein that contains a method for identifying a modulator of a protein that contains a method for identifying a modulator of a protein that contains a method for identifying a modulator of a compound, and determining any change in migration or shape of the cell compound, and determining any change in migration or shape of the cell attributable to the test compound. The compounds identified are contential therapeutic modulators of abnormal cell migration and organ shaping, e.g. for rendering animals (specifically nematodes) sterile and for inhibiting cancer metastases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 16, A Sequence 16, A Sequence 5, A B Sequence 11, A Sequence 11, A Sequence 17, A Sequence 5, Ap Sequence 11, A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Appearance 2, Appearance 2, Appearance 2, Appearance 15, Appearance 13, Appearance 13, Appearance 13, Appearance 15, Appearance 13, Appearance 15, Appearance 1
